5JR SERIES

RECTIFIED
MOLDED

SOLENOID VALVE CONNECTORS

GENERAL DESCRIPTION

The Canfield Connector 5JR Series solenoid valve connectors incorporate a full-wave bridge rectifier inside a fully molded connector. The 5JR converts alternating current to direct current reducing coil burnout due to valve sticking. Also, direct current eliminates AC "hum" inherent to alternating current. Made from rugged yet flexible polyurethane, the connector housing boasts high durability factors and application versatility. The low profile 90° interface/cord configuration allows for installation in many limited space applications. The integrated gasket design boasts an IP65/NEMA 4 rating and makes it impossible to lose the gasket! Features bi-directional indicator lights, and load suppression (not intended for UL 1449). The 5JR Series is proudly made in the U.S.A.
