Reduce Potential Infection Risk

Single-use is the only means of eliminating all risk of transferring infection by way of accessories from one patient to another.¹

Minimizes Leakage and Supports Insufflation

ClearGuard helps prevent leakage of bodily fluids to protect the patient and clinicians during exchange of endoscopic instruments.

Save on Tracking and Training

The Single-Use only ClearGuard eliminates tracking and registration and enables the use of simpler procedures that require less training support.

Sterile, single patient use

Helps reduce cross-contamination from infectious bodily fluids and prions.

Eliminates the need for reprocessing valves.

Lid with pre-cut slit

Allows for easy entry of accessories and limits back flow.

Transparent color

May allow for enhanced visibility for healthcare clinician.

Compatible with Olympus, Pentax and Fujinon

Available to fit all current major endoscopes.
