

## Precisor BRONCHO®

### Disposable Pulmonary Biopsy Forceps

The Precisor BRONCHO® disposable pulmonary biopsy forceps are ideal for obtaining tissue specimens from the airway. A streamlined jaw assembly and high performance handle ensure optimal control and tactile feel, resulting in fast and easy removal of biopsy specimens.

### Features and Benefits

#### Cam Design Jaws

Precise cutting action — large jaw sample capacity — endoscopic channel friendly

#### Channel-Guard® Coated Shaft

Enhanced pushability — reduced wear on biopsy channel

#### Streamlined Jaw Assembly

Designed to traverse bends more effectively for easy removal of biopsy specimens

#### High Performance Handle

Optimal control and tactile feel — ergonomically designed for comfort

### Design Comparison

#### Precisor BRONCHO® vs. Competitive Twin Wire

Jaw Opening  
Span Comparison

The Precisor BRONCHO® Forceps (left) has a wide jaw span

The Precisor BRONCHO® Forceps (left) has high capacity jaws

### Comparative View from Bronchoscope

Precisor BRONCHO®

Twin Wire Design

Precisor BRONCHO® streamlined jaw assembly provides a clear endoscopic view of the tissue site.

### Cam Design

The Precisor BRONCHO® Forceps has internal working components to help maintain biopsy channel integrity.

### Twin Wire Design

Accessories with protruding components can cause excessive biopsy channel damage and result in substantial scope repair costs.
