

SEVEN-PIECE PRISM & LENS SET—GLASS

OPSETG2

Figure 1

DESCRIPTION

The Seven-Piece Prism and Lens Set contains elements of optically clear glass for demonstrating basic ray optics phenomena and for viewing the effect of prisms on images. It includes five cylindrical objects with frosted bottom surfaces for use with a ray box or laser pointer and two clear prisms.

The set is shown in *Figure 1*. The ray optics items are a semicircular lens (1), a biconcave lens (2), a trapezoidal prism (5), a biconvex lens (6) and an equilateral prism (7). The two clear prisms are right-angled (3) and equilateral (4). The set comes in a wooden case (8) with a fitted foam liner.
